Da Maemo a SailfishOS

Vent'anni di Linux sui telefoni, raccontati da chi ci ha lavorato

Il crollo

- Febbraio 2011
- Delusione

Mer aims to be an open, inclusive, meritocratically governed and openly developed Core optimized for HTML5/QML/JS, providing a mobile-optimised base distribution for use by device manufacturers. The Core is based upon the work from the MeeGo project and hopefully, over time, to be sharing effort together with the Tizen project.

We have some clear goals:

- To be openly developed and governed as a meritocracy
- That the primary customers of the platform are device vendors - not end-users.
- To have a device manufacturer oriented structure, processes and tools: make life easy for them
- To provide a device oriented architecture
- To be inclusive of technologies (such as MeeGo/Tizen/Qt/EFL/HTML5)
- To innovate in the mobile OS space

Perhaps you'd like to talk to us?

- VPN
- Encryption

Pragmatismo vs Purezza

Ecosistema

- Store - Harbour
- SDK

E Maemo?

- Maemo Leste

Perché conta oggi

- Duopolio
- Importanza community
- Indipendenza tecnologica

Cosa resta

- Un linux vero in tasca
- Una community che si prende sul serio
- Si riparte senza chiedere permesso
- I prodotti finiscono, il codice no
- Chi controlla il software controlla tutto quello che ci gira sopra

Domande

- Cosa resta di quello che comprate, quando l’azienda produttrice chiude?
