Jailbreak all the things

Your phone is about to stop being yours.

Starting in 2027*, a silent update, nonconsensually pushed by Google, will **block every Android app** whose developer hasn't registered with Google, signed their contract, paid up, and handed over government ID.

Every app and every device, worldwide, with no opt-out.

Security News This Week: Area Man Accidentally Hacks 6,700 Camera-Enabled Robot Vacuums

Plus: The top US cyber agency falls into shambles, AI models develop an upsetting penchant for nuclear weapons, and more.

EoL hardware

What happens when a vendor discontinues a device?

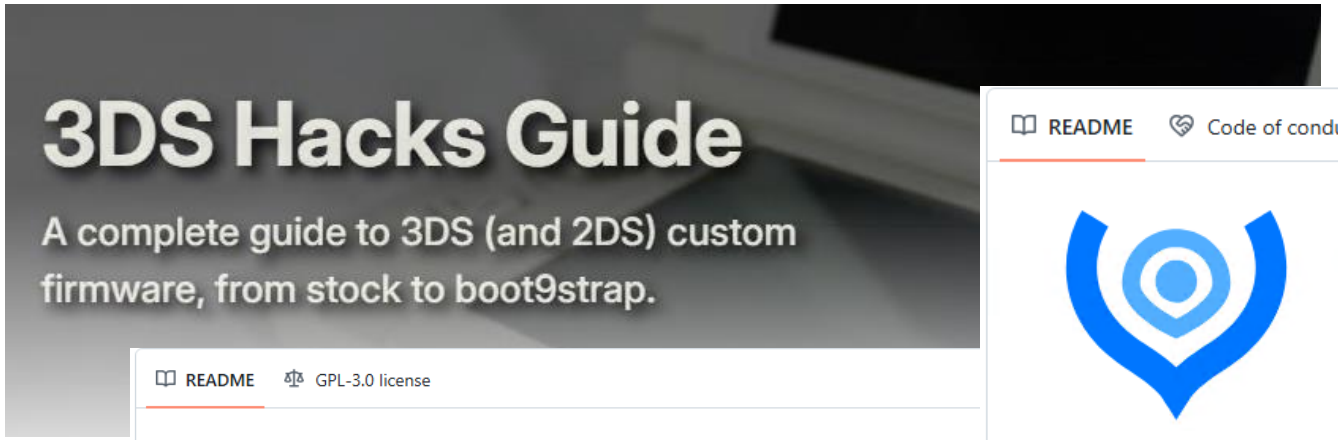

The hacker mindset

- Software should be **free and interoperable**
- **Ownership as principle**, take control of the hardware
- Sometimes, **just for fun**

Free your devices

Custom firmware allows devices to do what **you** want

YI-HACK
V5

chat 19 online downloads 68k

Why this `YI-HACK-V5` firmware?

The answer is simple: missing updates, RTSP, and not based on the latest stock firmware (which features improvements

Valetudo

Free your vacuum from the cloud

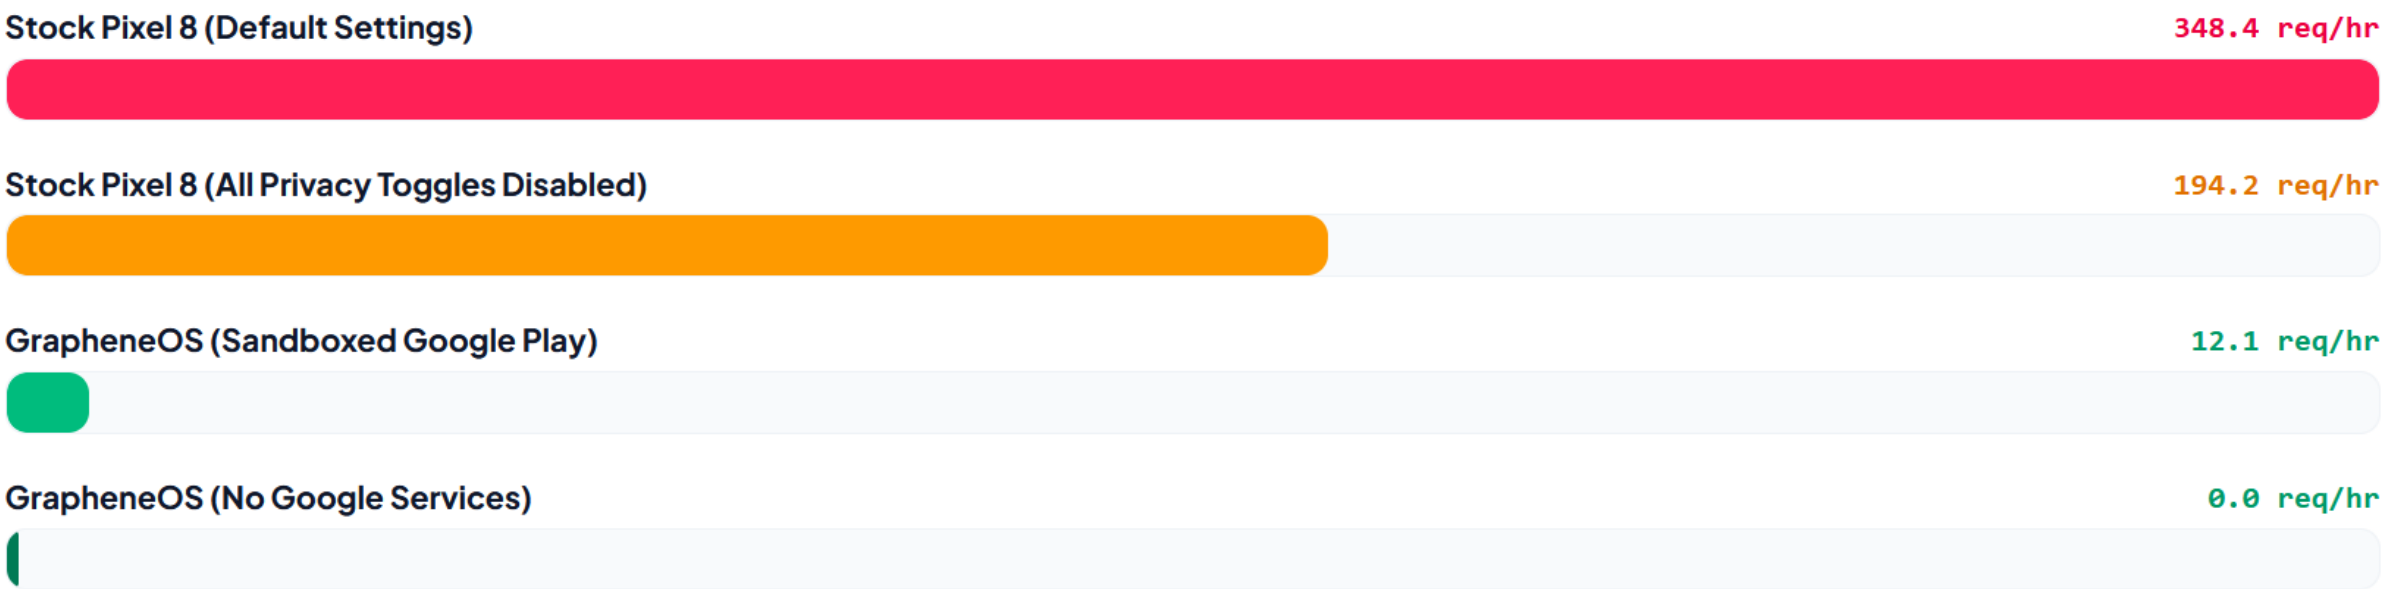

Valetudo is a cloud replacement for vacuum robots enabling local-only operation. It is not a custom firmware.
Here's a diagram illustrating the core operation principle:

The lockdown era

- Apple and Google hold a firm stance **against sideloading**
- Devices are **locked** to prevent the installation of a different OS
- Third party OSes have been shown to be **more secure and privacy friendly**
- The digital markets act considers this **unlawful**

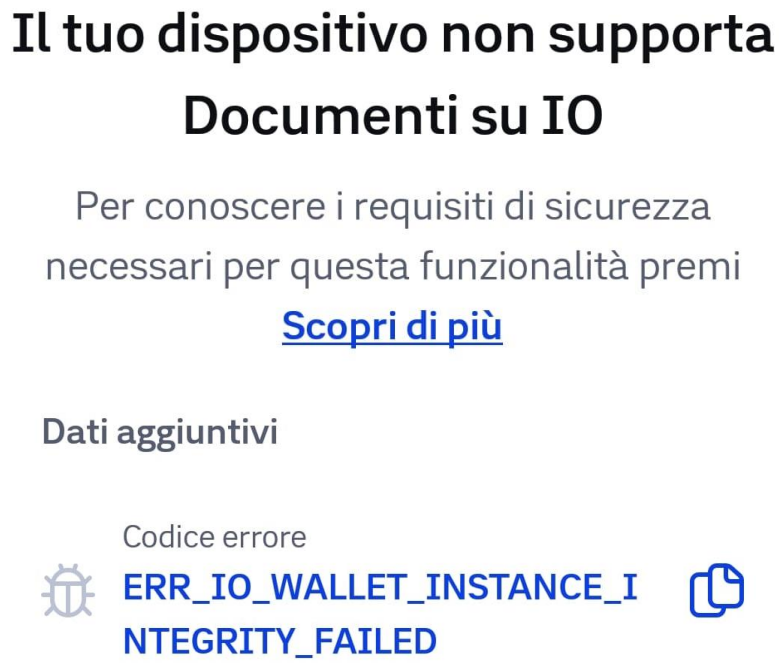

Unlocked is “insecure”

- **Locking down devices is sold as a security feature**
- Google uses their influence to push the **Play integrity API** which blocks alternative operating systems
- **Critical applications are gatekept** by foreign private companies

You don’t own your devices

Italian eIDs require a Google-approved phone

Security and user choice

Ublock origin removes Ads from webpages

Chrome blocks Manifest V2 because **it's not secure**

Adaway uses root to block ads in apps

Play integrity considers root access a **security threat**

Revanced improves YouTube's UX

Android introduces sideloading restrictions for **security reasons**

Keep jailbreaking

Integrity checks can by bypassed with exploits

alex193a / **Root-My-Pixel** Public

About

Jailbreak supported Google Pixel phones with CVE-2026-43499

BuSung-dev / **Root-My-Galaxy** Public

About

KSU installer for supported Samsung Galaxy firmware with CVE-2026-43499

The dark side

- Exploits can also be used for evil
  - Spyware
  - Data breaches
  - Fraud

- Security balance is hard and sometimes a personal choice
  - Update to be safe or stay behind to jailbreak?

Software should not be hostile

The arms race between programs and users

Raymond Chen

Eventually you have to decide which side wins, and Windows has decided to **keep users in control of their own programs and data**, and **keep administrators in control of their own computer**. So users can kill any process they want (given

Jailbreak all the things

(But responsibly)
